

## **ENVIRONMENTAL POLICY**

---

J. McCann & Co (Nottm) Ltd is committed to leading the industry in minimising the impact of its activities on the environment & as such aims to meet or exceed all the environmental legislation that relates to the Company.

The Environmental Management System (EMS) addresses the concerns of interested parties to ensure that we:

- Minimise toxic emissions through the selection and use of our fleet and the source of its power requirement. As such, vehicle movements are planned and co-ordinated. Engines are turned off when not in use to maximise resources and reduce vehicle emissions.
- Actively promote recycling both internally, as well as amongst our sub contractors and suppliers.
- Ensure that all site chemicals and hazardous substances are stored, handled and transported correctly in order to prevent pollution of land, air and water.
- Minimise waste by evaluating operations and ensuring they are as efficient as possible, introducing Waste Management Plans as appropriate.
- Obtain details of the environmental conditions where the Company is to commence work, ensuring that work is halted (pending review) on discovering areas of environmental sensitivity.

In order to achieve this we will establish targets to measure the continuous improvement in our environmental performance based on the Company's significant aspects, whilst providing sufficient resources to implement this policy. Information and relevant training shall be given to employees and subcontractors to ensure that Environmental Management System is fully understood and implemented.

The Organisation will make this policy available to all interested parties & consider further information requested on a case by case basis.
